(Established under Karnataka Act No. 16 of 2013)
100ft Ring Road, Bengaluru – 560 085, Karnataka, India

Problem Statement:

The Movie Booking System is a web-based application designed to simplify the process of booking movie tickets online. The platform enables users to browse upcoming movie events and check seat availability in real-time, reserve seats, order food combos, and make payments using multiple payment gateways. Users can also access their booking history and cancel bookings. This system ensures a seamless and engaging user experience, eliminating the need to stand in queues at theaters or event counters.

Key Features:

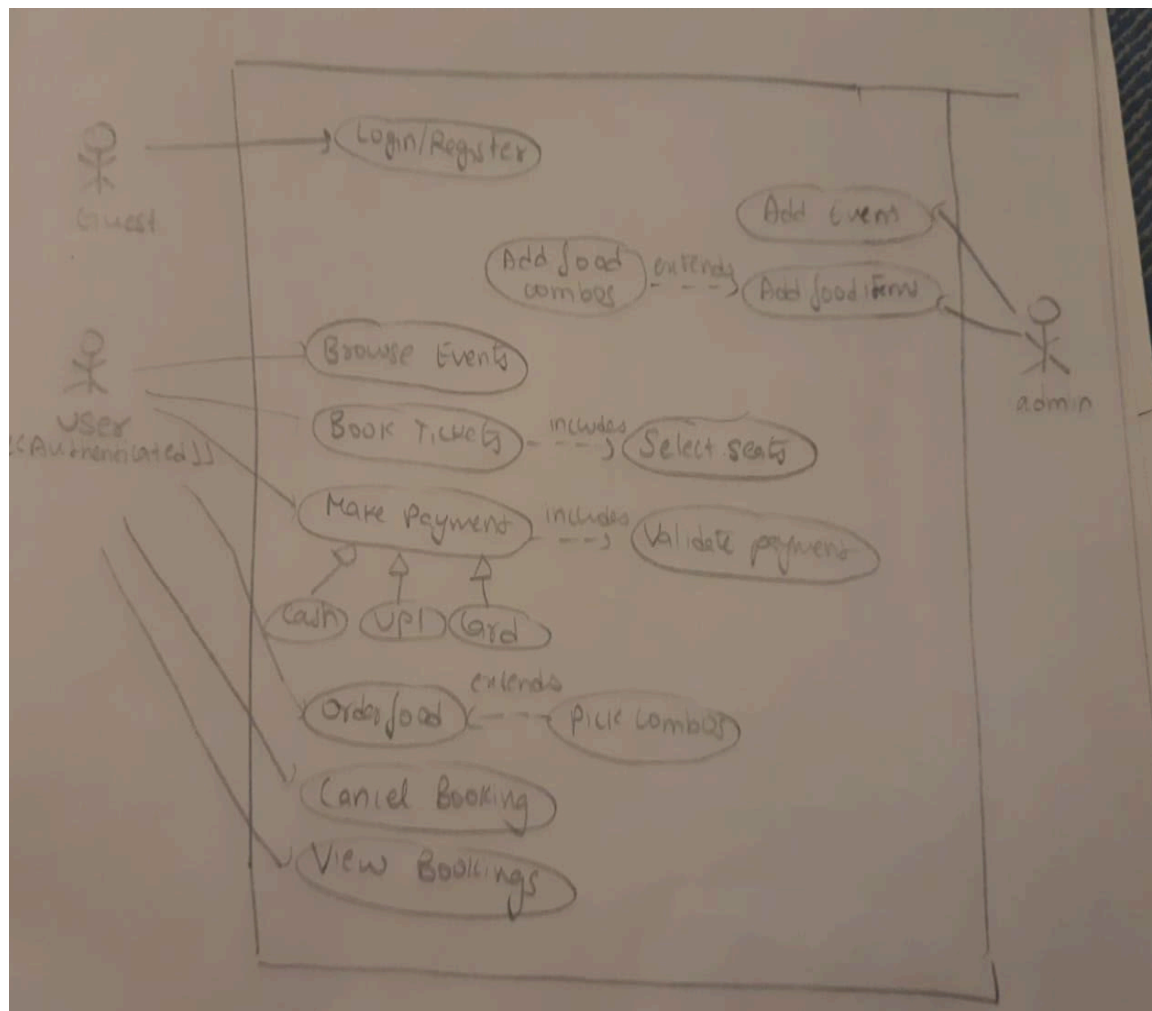

The system offers a wide range of features that enhance the booking experience for users and simplify event management for administrators:

- **User Authentication:** Secure login and signup functionality with role-based access.
- **Event Catalog:** Dynamic listing of available movies and events with details.
- **Real-Time Seat Selection:** Interactive seat map showing real-time availability and allowing users to reserve their preferred seats.
- **Food Combo Ordering:** Users can select and order snacks and combo offers during the booking process.
- **Payment Gateway Integration:** Multiple payment methods supported including CARD, UPI, and CASH.
- **Invoice Generation:** Users can view and download their invoice with booking, food order and billing information.

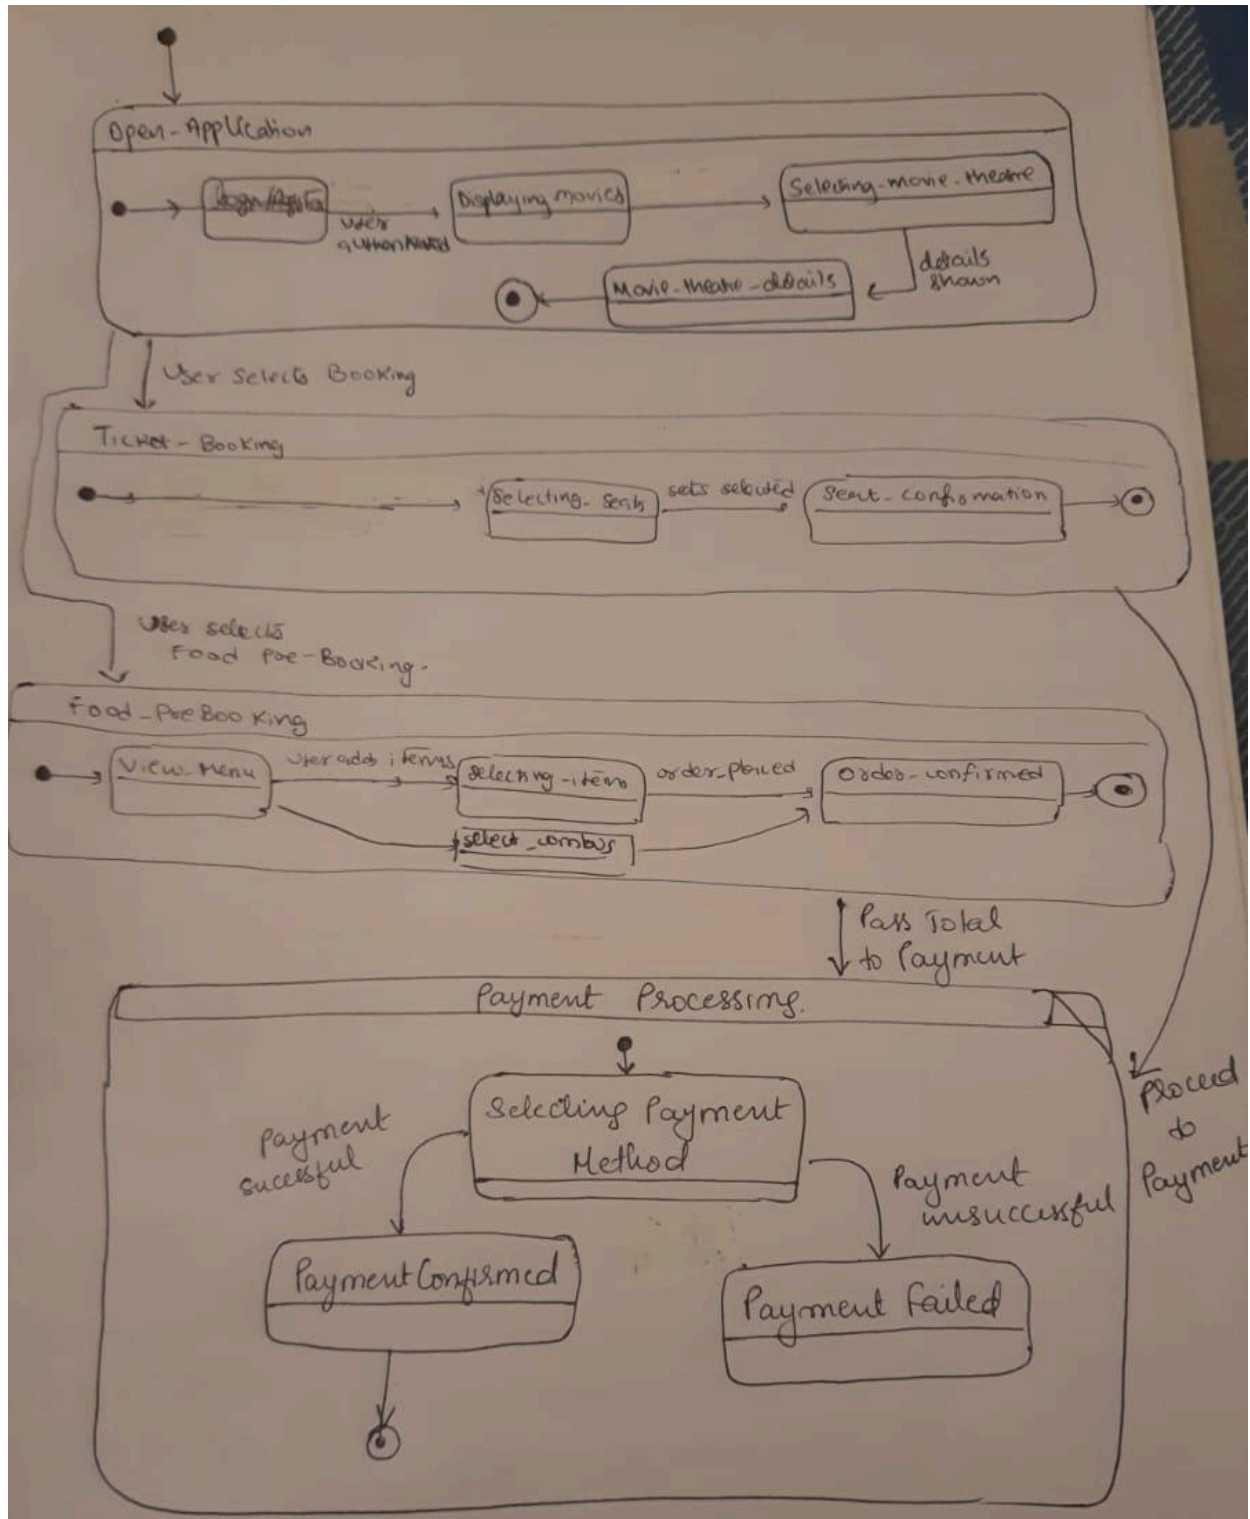

Models:

- User
- Event
- Booking
- Food Order
- Food Combo
- Payment

Architecture Patterns, Design Principles, and Design Patterns:

Architecture Patterns

Model – View – Controller Pattern (MVC)

- **Model:** Represents the core data logic of the system. This includes entities such as User, Event, Seat, Booking, FoodCombo, and Payment. These models encapsulate database interactions and business rules.
- **View:** The user interface is built using HTML, CSS, and JavaScript. It displays event listings, seat layouts, food combos, payment gateways and booking summaries. It communicates with the backend via REST APIs to ensure a dynamic and responsive experience.
- **Controller:** Controllers handle incoming user requests, process input, and invoke appropriate service methods, they connect to services and repositories. Examples include EventController, BookingController, PaymentController etc.

Design Principles

- **Separation of Concerns:** Different modules handle logic, presentation, and data.
- **Single Responsibility Principle:** Each class or component has a single role.
- **DRY (Don't Repeat Yourself):** Code reuse across services and controllers.
- **Open/Closed Principle:** The system supports extensibility without modifying existing code.

Design Patterns

The Event Management System incorporates four key design patterns to enhance modularity and scalability.

- **Builder Pattern** simplifies the creation of complex Event objects by providing a fluent interface for setting properties, ensuring immutability and validation.
- **Chain of Responsibility Pattern:** For payment processing, decouples validation steps (e.g., amount checks, card/UPI verification) into linked handlers, enabling flexible and maintainable payment workflows.
- **Command Pattern:** encapsulates booking actions (e.g., create/cancel) as objects, supporting undo/redox functionality and decoupling UI interactions from backend logic.
- **Prototype Pattern** :optimizes food combo orders by allowing efficient cloning of predefined meal templates, reducing database load and ensuring consistency.

Login page:

The image shows a login page design. It features a light beige background. In the center is a white rounded rectangle with a subtle drop shadow. Inside this rectangle, the word "Login" is centered at the top in a bold, black, sans-serif font. Below "Login" is another white rounded rectangle, also with a drop shadow. Inside this inner rectangle, the label "Email:" is centered above a wide, light gray rectangular input field. Below the input field, the label "Password:" is centered above another wide, light gray rectangular input field. At the bottom of the inner rectangle, there are two buttons: a blue button with the text "Login" in white, and a black button with the text "Back" in white. Both buttons have a slight 3D effect with a shadow.
